3500 parts
Posted by bluebill - 02 Apr 2012 14:14

---

i just picked up a used country side magnum 3500 for almost nothing, looking to install new motors & fans, tried contacting surplus center with some of the part numbers i got off the old forum but they are no longer available, does anybody know where you can get replacement motors & fans beside the factory, thanks for all the help.

Does the stove work, all motors run? If everything works, what needs replacing?

---

the room fan is quite loud & making a squeeling sound, the auger motor makes kinda of a growling noise when it is running, took auger motor off & filled it with grease, helped a little but still growls.

ended up oiling room fan which quieted it down and replaced the auger motor with one from american energy, now the problem i have is to much heat, its dropping down into the 20's & 30's at night with highs in the 40's i am running it on setting 1 yet its 75 in my house, any way to run these lower to save some pellets & keep house temp at 68 when its not so cold outside, thanks.

Too much heat? A nice problem to have unless it's causing climate change.

Go to AES's web site and download an owners manual. The manual will show you where and how to adjust the auger feed rate for the lowest settings. Looks like there is 3 different years manual.

www.americanenergysystems.com/owners-manuals.cfm

www.americanenergysystems.com/Stock/Libr...rmanual0509rev10.pdf

This is where it is on the above manual. Page 39 (between 38 and 40)
