Bixcheck cable
Posted by MARKS - 21 Dec 2010 17:48

I bought my bixby model 115 in 2006 and have never upgraded the software. Can anyone give me the pinout on the db9 side of the connector. I found the software at bixby downloads and the stove side pinout on the wiki site. I'm sure i'll have more questions once i figure the cable out.

I can help you there, Hub. Send me your email address by PM. I'll send you ver 2.02. The exe file will be renamed to a txt extension to get it through our respective mailers. Simply rename it back to exe.

Corny I sent you my email address.

Can't thank you enough for the help!

Hub & Mdesau, Bixcheck 2.02 has been emailed to you both. It is the complete package including:

- TXT Release Notes

- EXE file (disguised as TXT)

- HEX file (installer doesn't have built-in hex file; it resides separately and invoked as MaryB advised)

- PDF user guide

Let us know if this works!

Better yet, here is the complete Bixcheck 2.02, less the pdf file, which is too large at approx 1 Mbyte and still available on the Bixby site, I think.

Rename Bixby115_A202_Final.txt to Bixby115_A202_Final.hex .

Rename BixCheck42.txt to BixCheck42.exe .

EDIT: The disguised exe file did not make it through here. Scroll down to my next post, to which the exe file is attached.

The disguised exe file exceeded the forum's size limit. Here it is again, packaged as a disguised zip file.

- Rename ExeFileOnly.txt to ExeFileOnly.zip .

- Unzip

- Rename BixCheck42.txt to BixCheck42.exe .

_____

Thanks Corny. Got the files and have monitor running. Nice to see some accurate data. I haven't decided whether or not to try the upgrade tonight or wait till tomorrow since temps are in the mid teens now and not sure if I want to shut it down. Will keep you posted on how it works out.

_____

I checked with JA to see if I misstepped by attaching the disguised exe file, above. He was gracious and suggested the following:

"You should, if the edit time is still open, add this information:

MD5 (Bixby115_A202_Final.exe) = 728f6cbd5a7aaf328d691dee65a45d2c

Which will allow people to confirm they have the complete and error free file."

The edit time was closed, but you now have it here for good measure. I'm not even sure that I know what it means.

_____

Here's a newbie question.... How can I tell what software version my 115 is running if I don't have

access to a communication cable? My serial # is 6054 and it say it was made March of 2006 on the label.
