Has anybody had success with 100% wood pellets?
Posted by ksninew - 01 Sep 2011 02:10

_____

I've been burning 100% corn in my 620-10 for the past 5 years with great success, but would like to try 100% wood pellets this winter. If I use high quality wood pellets will it work without doing a conversion?

_____

I will throw in my thoughts on pure pellets. I have the pellet kit from Stateline Corn Burners.

- I hate bags. Corn in buckets is a lot nicer and easier to handle.

- My furnace keeps going way above the burn pot. I scrape the clinker tool around the edges twice a day when I come in from chores and it still builds up REALLY hard ash on the bottom.

- Corn is hotter. The house is warmer and nicer when I burned corn or a mix.

- Mixes burn better with less ash and less problems.

_____

I will second the corn mix, but I saw some really high temps on my door burning pellets, once they are dialed in, but it sure does eat thru them on the real cold nights!

_____

My bad, that was a slight corn mix I was burning. LOL ignore the second part of my previous post.
