Quad AE Wall Control Flicker

Posted by ARGlock - 16 Nov 2012 22:03

Hello Amigos!!

I've got a friend with a Quad AE and he is experiencing a flicker with his wall control when he goes to adjust it. When he starts to adjust it, it goes to wakeup. The stove is working but it has this crazy flicker with the wall conrol that he does not like. Kap and gang, is there a cheap fix like cleaning contacts or does it require a new wall control? The number on the back of the wall control cover is #7000-310.

Thanks,

AR

---

cut the terminals off where they connect to the stove and remove the zip tie on the inside that connects from the terminal block to the control board. this should take care of it.
