cherry pits vs corn and can I burn them?
Posted by maineshire - 07 Feb 2013 16:24

I have a positive flow Pinicale Corn Stove. I have been told I cannot burn wood pellets in it because it is positive flow. Is it possible to burn cherry pits?

Sorry... corn only. There is a risk of the fire travelling back up the auger chute into the hopper. Now you have a house fire.

I'm burning rye in mine now works great I can run as low a 3/4-1 on feed setting where corn the lowest I could run was 1 1/2

. I have also burned wheat in my Pinicale

_____

Emerald 3000 it's a positive flow. Rye and wheat burn like corn it will clinker in the pot just a little bit softer clinker than corn.
